Product Description

STIHL HTA 160 10" Battery Powered Pole Pruner (Unit Only)

Powerful and professional, this battery-powered pole pruner features a telescoping-shaft.

The HTA 160 is a powerful, professional, battery-powered pole pruner with a telescoping shaft. The HTA 160, the most powerful cordless pole pruner in the AP Battery System, is ideal for tree maintenance and fruit orchards. The telescoping shaft features a unique, square-shaft design that stays strong and rigid, so you can prune high branches up to 13'3" with ease and precision. Its lightweight gearbox design provides high-speed precision while pruning; and when not pruning, a foot mount support keeps the machine from resting directly on the ground. You can control the machine's speed with the variable-speed trigger, optimizing performance for the longest run time. The HTA 160's brushless motor is efficient and virtually maintenance free. This pole pruner is also designed to seamlessly connect with the STIHL Smart connector 2 A, which allows you to take advantage of the STIHL connected platform and manage your fleet like never before.
